Camilo Giraldo Ramirez

Sr. Software Developer

cagiraldo88@gmail.com

Cel (+57) 312 386 5021

PROFESSIONAL OVERVIEW

Mr. Giraldo is a Senior Software Engineer with a deep technical foundation and over 9 years of experience delivering high-impact technological solutions. For more than a decade, he has led and participated in teams doing analysis, design, development, implementations, enhancements and testing of applications in the banking, logistics, and healthcare sectors. While his core expertise and most of his professional career have been dedicated to Java and its ecosystem (Spring Boot, Microservices), he has also contributed to backend development using other technologies such as .NET and Node.js. He combines this technical versatility with a focus on cloud architectures in AWS and Azure, as well as the integration of Artificial Intelligence tools to optimize delivery cycles and ensure the maintainability of complex systems.

Roles	• Senior Software Engineer. • Full Stack Developer (Java/Angular/React)
Solutions	• Custom Web applications • Microservices Architecture • Enterprise Application Integration
Industries	• Banking. • Financial Services. • Logistics and Transportation. • Healthcare. • Construction. • Car Rental.
Technologies	• Backend: Java/JEE (Expert), Spring Boot, Spring Cloud, .NET, Node.js, JavaScript. • Frontend: Angular, React, HTML5, CSS3 • Databases: Oracle, SQL Server, MySQL, PostgreSQL, Redis, RDS, DocumentDB • Cloud: AWS, Azure, GCP • DevOps: Jenkins, Git, Maven, Gradle, Azure Pipelines, checkmark, blackduck • Architectures: Microservices, Monolithic, Event Drivent, API Services • Brokers: Kafka, Azure Service Bus, SQS

KEY ENGAGEMENTS

Large Multinational Financial Institution	Senior Software Engineer	Participated in a technical team doing analysis and design, while performing leadership tasks such as architectural proposals, TDD definitions, and project sizing for digital banking microservices, utilizing Java and Spring Boot.
Global Regulatory Compliance Solutions Provider	Senior Software Engineer	Participated in a development team doing analysis, design, and implementation of new features for SEC and ESEF regulatory compliance, utilizing Java and React.

Global Logistics and Transportation Leader	Software Engineer	Participated in a team doing the modernization and migration of monolithic modules to microservices for global logistics systems, utilizing Java 16 and Cloud computing.
Major Car Rental Company in Latin America	Software Engineer	Participated in a team doing the development and maintenance of core business applications to optimize rental processes and customer management, utilizing Java and SQL.
Large Real Estate and Construction Company	Software Engineer	Participated in a team doing the design and development of internal platforms for project management and construction tracking, utilizing Java, Angular, and Oracle.
Major Health Insurance and Healthcare Provider	Software Engineer	Participated in a team doing the development of digital solutions for insurance processing and healthcare service management, utilizing Java and web technologies.

PROFESSIONAL AND BUSINESS EXPERIENCE

Education

Bachelor of Science in Systems Engineering, Universidad Antonio José Camacho, 2019 (Colombia)

Associate Degree in Software Analysis and Development, SENA 2016 (Colombia)

Professional Training/Certifications

AWS Certified Cloud Practitioner, 2025

AWS Certified IA Practitioner, 2026
Product Prioritization Micro-Certification (PPC), Product School
Product Discovery Micro-Certification (PDC), Product School
Java Functional Programming with Lambdas & Streams, Udemy, 2022
Go Fundaments, Udemy, 2024
Full Stack Developer, 2019

Sr. Technical Consultant

CLIENT: Multinational Financial Institution (Banking)

Participated in a 15-person team doing analysis, design, development, implementation, and testing of digital banking microservices and high-volume payment systems, utilizing Java, Spring Boot, Spring Cloud, AWS, and Microservices architecture.

Responsibilities: Senior Software Developer, led architectural proposals and technical design for scalable microservices, ensuring alignment with global banking security standards.

- Performed project sizing and technical estimations for new features, acting as a bridge between business requirements and technical execution.
- Design Technical documents.
- Developed and optimized RESTful APIs and event-driven components to support "Click to Pay" initiatives.
- Implemented Test-Driven Development (TDD) practices and participated in peer code reviews to ensure high code quality.
- Collaborated on the design and development of asynchronous microservices APIs based on event-driven architecture (EDA) to handle high-volume data processing.

Business/Technology Value

- Modernized the client's banking infrastructure by transitioning legacy components to microservice-based architecture, significantly improving system scalability and reducing time-to-market for new financial products

CLIENT: Senior Software Developer Global Regulatory Compliance Solutions Provider

Participated in a 6-person team doing analysis, design, development, and implementation of new features for SEC and ESEF regulatory compliance platforms, utilizing Java 11 and React.

Responsibilities: Developed complex backend modules for financial data processing and regulatory reporting accuracy.

- Collaborated on the frontend using React to improve user interaction with compliance filing tools.
- Optimized database queries and service performance to handle large volumes of financial data.
- Developed and optimized RESTful APIs and event-driven components to support SEC and ESEF regulatory compliance platforms.
- Collaborated on the design and development of asynchronous microservices APIs based on event-driven architecture (EDA) to handle high-volume data processing.

Business/Technology Value

- Enhanced the platform's ability to meet strict international regulatory standards, reducing manual errors in financial filings and improving the reporting experience for global corporate clients.

CLIENT: Software Developer Global Logistics and Transportation Leader (Logistics)

Participated in an 8-person team doing the modernization and migration of monolithic modules to microservices for global logistics systems, utilizing Java 16 and Cloud computing.

Responsibilities: Executed the migration of legacy business logic into modern, cloud-native microservices.

- Integrated third-party APIs for real-time tracking and logistics management.
- Ensured high availability and performance of critical supply chain applications.

Business/Technology Value

- Improved operational efficiency by reducing system downtime and enabling faster integration of global logistics data across multiple regions.

CLIENT: Software Developer, Major Car Rental Company / Real Estate Leader

Participated in teams doing analysis, design, and development of core business platforms for car rental management and construction project tracking, utilizing Java, Angular, and Oracle.Designed internal modules for construction project management, improving resource allocation and tracking.

Responsibilities: Developed and maintained full-stack features for rental processing and inventory control.

- Designed internal modules for construction project management, improving resource allocation and tracking.

Business/Technology Value

- Streamlined internal operations for two major regional players, resulting in faster customer processing times and better data visibility for project stakeholders.

CLIENT: Full Stack Developer, Healthcare Solutions Provider

Participated in a 5-person team doing analysis, design, development, and testing of a core insurance management system and medical authorization platform, utilizing Java, JSP, Servlets, and Oracle.

Responsibilities: Developed and maintained full-stack features

- Collaborated with business analysts to translate healthcare insurance requirements into technical specifications and robust code.
- Participated in the full software development lifecycle, focusing on the migration of manual processes into automated digital workflows.
- Developed and maintained web-based modules for medical service authorizations and member management, ensuring compliance with healthcare regulations.

Business/Technology Value

Streamlined the medical authorization process, reducing the processing time for affiliate requests and improving the overall efficiency of healthcare service delivery. system enhanced the accuracy of financial reporting and reduced administrative overhead for the insurance provider.
