Cali - Colombia

## Professional Overview

Full Stack Engineer with 10+ years of experience building scalable, high-impact technological solutions. Expert in Java, .NET, Node.js, and modern frameworks like React and Angular. My solid foundation in traditional software engineering allows me to ensure quality, technical rigor, and maintainability in every development.

Additionally, I have enhanced my workflow by consciously integrating Artificial Intelligence tools, using them to optimize delivery times and improve precision without compromising technical fundamentals. Specialist in cloud architectures (AWS/Azure) and technical leadership, I transform complex challenges into robust and efficient systems.

## Skills & Technologies

| | | |
|---|---|---|
| Roles | • FullStack Developer Java/angular<br>• FullStack Developer Java/reactjs | • FullStack Developer .Net/angular<br>• Senior. Java Developer<br>Intermediate Angular Developer |
| Solutions | • Product Lifecycle Management (PLM)<br>• Enterprise Application Integration (EAI)<br>• Business Process Management (BPM)<br>• Custom Web applications | |
| Industries | • Logistics and Transportation<br>• Financial<br>• Car Rental | • Health Insurance Construction<br>• Banking |
| Technologies | • Java/JEE platforms *(expert)*<br>• Spring Framework *(expert)*<br>• Spring Boot *(expert)*<br>• Spring cloud / Feing *(intermediate)*<br>• Spring Batch *(intermediate)*<br>• CircuitBraker/ Gateway *(intermediate)*<br>• .Net/ EntityFramework *(basic)*<br>• AngularJs/ Angualr 2x *(intermediate)*<br>• React,js/ redux-saga/ redux-form *(basic)*<br>• Node.js *(basic)*<br>• Typescript *(intermediate)*<br>• Maven *(expert)*<br>• Gradle *(expert)*<br>• Postgresql *(intermediate)*<br>• Oracle DB *(intermediate)* | • CI/CD *(intermediate)*<br>• Jenkins *(intermediate)*<br>• New Relic *(intermediate)*<br>• Harness *(intermediate)*<br>• HTML *(intermediate)*<br>• CSS *(intermediate)*<br>• JavaScript *(intermediate)*<br>• GIT *(intermediate)*<br>• Azure/ DB2/ ASB *(basic)*<br>• AWS/ RDS/ IAM/ S3/ EKS *(basic)*<br>• Testing *(intermediate)*<br>• Jest *(intermediate)*<br>• PHP *(intermediate)*<br>• MYSQL *(intermediate)*<br>• Kafka *(intermediate)* |

## Key Engagements

| | | |
|---|---|---|
| **Secure financial reporting and SEC filing** | Sr. Software Developer<br>*Full Stack java / React* | New features were developed that allowed the application to support new standards not only SEC of the United States, but ESEF which means the arrival of new customers from the European Union. |
| **Supply Chain Management and Logistics** | Software Developer<br>*Java developer* | I contributed to the modernization of legacy technologies by migrating them to newer versions and implementing cloud computing solutions, ultimately enhancing efficiency, scalability, and accessibility for end clients. |
| **Purchase Process Management and Construction Progress Tracking Application** | Software Developer<br>*Full Stack Java/ Angular* | I participated in the migration of various modules from a monolithic application to microservices, improving interfaces and response times. As a result, the client would have a better user interface and be able to track their products more effectively. |
| **Vehicle Rental Agency's Electronic Invoicing Management System** | Software Developer<br>*Full Stack .Net/ Angular* | An application was created from scratch, which allowed the company to have a friendly visual form and easy management of the detailed information of the lease invoices which served as a supply for electronic invoicing imposed by the DIAN in Colombia. |
| **Healthcare Enrollment Management System** | Software Developer<br>*Full Stack Java / Angular* | Participated in the development of new features for an application that would allow a large part of the Colombian population to access health services in the Colombian coastal zone by integrating people with the national health system. |

## Professional and Business Experience

**Perficient, Inc.** **Sept 2019 – Present**
Senior Software Developer

**Client: Scotiabank Uruguay**

At Scotiabank Uruguay, I took on technical leadership responsibilities by scaling microservices and resolving critical vulnerabilities, while actively supporting the team in technical incident resolution and access management. I contributed to the analysis and design of initiatives, creating Technical Design Documents (TDD) and EARB presentations for development committees. Additionally, I delivered talks on best practices, conducted code reviews, and introduced new methodologies and DevOps technologies, ensuring continuous improvement. My role also included estimating and defining tasks for future development, strengthening both team efficiency and project delivery.

Responsibilities:

- Scaled microservices and resolved critical vulnerabilities.
- Took on leadership responsibilities: analysis and design of initiatives, creation of **TDD (Technical Design Documents)** and **ARB** presentations for development committees.
- Managed team access requests and supported technical incident resolution.
- Delivered talks on best practices, conducted code reviews, and introduced new methodologies and DevOps technologies.
- Estimated and created tasks for future development initiatives.

**Client: Donnelley Financial Solutions**

As part of the team at Donnelley Financial Solutions, a Fortune 500 company, I contributed to the development of new features aimed at enabling the application to comply with new regulatory standards. This included ensuring adherence to SEC filing requirements in the United States and ESEF standards in the European Union. By facilitating compliance with these standards, our efforts supported the seamless onboarding of new clients from the European Union.

Responsibilities:

- Developed new features using Full Stack Java and React technologies.
- Collaborated with the team to analyze, design, and implement enhancements to meet regulatory requirements.
- Developed and implemented new features to support SEC and ESEF standards.
- Implemented new REST API services to enhance application capabilities.

Business/Technology Value

- The implementation of new features and compliance with SEC and ESEF standards allowed Donnelly Financial Solutions to attract new customers from the European Union, expanding their market reach and increasing revenue opportunities.

**Client: DHL US**

DHL, a Fortune 500 company, stands as a global leader in supply chain management and logistics services. As a member of the team, I played a pivotal role in modernizing their technology infrastructure, particularly within Java development. This encompassed upgrading from Java 8 to Java 16, migrating modules from a monolithic project to a microservices architecture, and deploying cloud computing solutions. These strategic initiatives were designed to elevate efficiency, scalability, and accessibility for DHL's esteemed clientele.

Responsibilities:

- Participated in scaling up technology from Java 8 to Java 16.
- Participated in the migration of modules from a monolithic project to microservices architecture.
- Implemented cloud computing solutions to improve system performance and scalability.
- Ensured high quality and code coverage through rigorous testing and code reviews.

Business/Technology Value:

- The modernization efforts improved the efficiency and scalability of DHL's technology infrastructure, enabling better performance and service delivery to end clients. This upgrade also future-proofed the system, allowing for easier adaptation to evolving business needs and technological advancements.

**Client: Constructora Bolívar**

Constructora Bolívar is a leading construction company specializing in purchase process management and construction progress tracking. As part of the team, I participated in the modernization of their software application. This involved migrating various modules from a monolithic application to microservices architecture, utilizing full stack Java and Angular technologies. The primary objective was to enhance interfaces and response times, thereby improving user experience and enabling more effective tracking of construction projects for the client.

Responsibilities:

- Participated in the migration of modules from a monolithic application to microservices architecture.
- Collaborated with the team to optimize response times and performance of the application.
- Conducted testing and debugging to ensure the reliability and functionality of the software.
- Integration with national electronic invoicing system
- Developed and implemented new features to improve interfaces and user experience.

Business/Technology Value

- The migration to microservices architecture and the implementation of new features resulted in significant improvements to Constructora Bolívar's software application. The enhanced interfaces and improved response times provided a better user experience for the client, allowing them to track their construction projects more effectively and efficiently.

**Client: Mutual Ser EPS**

Mutual Ser EPS is a leading healthcare provider dedicated to offering health services to the Colombian population. As part of the team, I participated in the development of their Healthcare Enrollment Management System. This involved creating new features to streamline the enrollment process for individuals accessing health services in the Colombian coastal zone. Additionally, contributed to integrating the system with the national health system of Colombia, enabling seamless data exchange and interoperability.

Responsibilities:

- Collaborated in the development of new features for the Healthcare Enrollment Management System.
- Integrated the system with the national health system of Colombia to ensure data exchange and interoperability.
- Implemented Spring Batch to optimize performance in data integration processes.
- Conducted testing and debugging to ensure the reliability and functionality of the system.

Business/Technology Value:
The development of new features and integration with the national health system enhanced the functionality and accessibility of Mutual Ser EPS's Healthcare Enrollment Management System. By streamlining the enrollment process and improving interoperability, the system facilitated access to health services for a large part of the Colombian population in the coastal zone, ultimately improving healthcare outcomes and patient satisfaction.

**Client: Localiza Colombia**

Localiza Colombia is a leading vehicle rental agency dedicated to providing rental services to customers. As part of the team, I contributed to the development of their Vehicle Rental Agency's Electronic Invoicing Management System. This involved creating an application from scratch to facilitate the management of detailed lease invoice information, which was necessary for electronic invoicing compliance mandated by DIAN in Colombia.

Responsibilities:
Developed new interfaces using Angular to enhance the visual appeal and usability of the application.
Created new APIs using .NET to support the backend functionality of the system.
Integrated WSDL with the international electronic invoicing system to ensure compliance with DIAN regulations.
Conducted testing and debugging to ensure the reliability and functionality of the system.

Business/Technology Value:

- The development of the Vehicle Rental Agency's Electronic Invoicing Management System provided Localiza Colombia with a user-friendly and efficient solution for managing lease invoice information. By streamlining the invoicing process and ensuring compliance with DIAN regulations, the system facilitated electronic invoicing compliance and improved operational efficiency for the company.

**Stefanini Latam** **Oct 2018 – Sept 2019**
Software Developer

Participated in a team of developers creating internal applications for Carvajal Tecnologías y Servicios and its electronic invoicing platform, serving over 500 clients across three Latin American countries. Utilized various technologies including Java, Spring Boot, MyBatis, Spring Data, REST, and WSDL.

Responsibilities:

- Developed applications using Java Spring Boot, MyBatis, Spring Data, REST, and WSDL.
- Collaborated in the analysis, design, development, implementation, enhancements, and testing phases of the projects.
- Implemented multithreaded programming techniques and utilized threaded APIs for enhanced performance.
- Created DLLs, custom controls, dialogs, and document/view components to optimize functionality.

Business/Technology Value

- Enhanced internal processes and efficiency through the development of robust applications.
- Enabled seamless electronic invoicing services for over 500 clients, spanning three countries in Latin America.

**IP Total Software** **Jul 2013 – Sept 2017**
Junior Software Developer

Cliente: CNT Ecuador

At IP Total Software, I worked as a full stack developer using Java, HTML, JavaScript, jQuery, and GWT, participating in the design and development of an application built from scratch and implemented at the Corporación Nacional de Telecomunicaciones (CNT) of Ecuador. This solution enabled the efficient management of call traffic nationwide, becoming a critical tool to ensure service continuity and quality across the country.

Responsibilities:

- Contributed as a full stack developer using Java, HTML, JavaScript, jQuery, and GWT.
- Designed and developed an application from scratch, implemented at CNT Ecuador, to manage call traffic nationwide.
- Participated in all phases of the software lifecycle: analysis, design, development, testing, and deployment.
- Ensured scalability and reliability of the solution, guaranteeing service continuity in a high-demand environment.

## Education

- Bachelor's degree in systems engineering, Universidad Antonio Jose Camacho, Col. 2019
- Technology in software analysis and development SENA, Col. 2016

## Professional Training/Certifications

AWS Certified IA Practitioner, In progress.

AWS Certified Cloud Practitioner, 2025.

Product Prioritization Micro-Certification (PPC)

Product Discovery Micro-Certification (PDC)

Java Functional Programming with Lambdas & Streams, Udemy, 2022

Go Fundamentos, Udemy 2024

Scrum developer, 2017.

Full Stack developer, 2019.

Oracle 11g fundamentals,2014.

Streams & Lambdas Java, Udemy
